Part I. High Aperture Optical Systems and Super-Resolution

1 Exploring Living Cells and Molecular Dynamics with Polarized Light Microscopy

<i>S. Inoué</i>	3
1.1 Introduction	3
1.2 Equipment Requirement	3
1.3 Biological Examples	8
1.4 Video-Enhanced Microscopy	12
1.5 The LC Pol-Scope	13
1.6 The Centrifuge Polarizing Microscope	14
1.7 Polarized Fluorescence of Green Fluorescent Protein	17
1.8 Concluding Remarks	18
References	19

2 Characterizing High Numerical Aperture Microscope Objective Lenses

<i>Rimas Juškaitis</i>	21
2.1 Introduction	21
2.1.1 Disclaimer	21
2.1.2 Objective Lens Basics	22
2.2 Point Spread Function	23
2.2.1 Fibre-Optic Interferometer	24
2.2.2 PSF Measurements	25
2.3 Chromatic Aberrations	28
2.3.1 Apparatus	28
2.3.2 Axial Shift	30
2.4 Pupil Function	31
2.4.1 Phase-Shifting Interferometry	32
2.4.2 Zernike Polynomial Fit	33
2.4.3 Restoration of a 3-D Point Spread Function	36
2.4.4 Empty Aperture	37
2.5 <i>Esoterica</i>	39
2.5.1 Temperature Variations	39
2.5.2 Apodization	40
2.5.3 Polarization Effects	42

2.6	Conclusion	42
	References	43
3	Diffractive Read-Out of Optical Discs	
	<i>Joseph Braat, Peter Dirksen, Augustus J.E.M. Janssen</i>	45
3.1	Introduction	45
3.2	Historic Overview of Video and Audio Recording on Optical Media	45
3.2.1	The Early Optical Video System	47
3.2.2	The Origin of the CD-System	48
3.2.3	The Road Towards the DVD-System	49
3.3	Overview of the Optical Principles of the CD- and the DVD-System	50
3.3.1	Optical Read-Out of the High-Frequency Information Signal	50
3.3.2	Optical Error Signals for Focusing and Radial Tracking of the Information	55
3.3.3	Examples of Light Paths	58
3.4	Radial Tracking for DVD	60
3.4.1	A Diffraction Model for the DPD and DTD Tracking Signal	60
3.4.2	The Influence of Detector Misalignment on the Tracking Signal	62
3.4.3	The DTD Tracking Signal for the DVD-System	65
3.4.4	The DTD2 and the DTD4 Signal in the Presence of Defocus	66
3.5	Compatibility Issues for the DVD-and the CD-System	68
3.5.1	The Substrate-Induced Spherical Aberration	69
3.5.2	The Effective Optical Transfer Function	73
3.5.3	The Two-Wavelength Light Path	74
3.6	Efficient Calculation Scheme for the Detector Signal	75
3.6.1	Optical Configuration and the FFT-Approach	75
3.6.2	The Analytic Approach	77
3.6.3	The Harmonic Components of the Detector Signal	80
3.6.4	The Representation of the Function $F_{m,n}(x, y)$	81
3.6.5	Orthogonality in Pupil and Image Plane	83
3.7	Conclusion	84
	References	84
4	Superresolution in Scanning Optical Systems	
	<i>Roy Pike, Deeph Chana, Pelagia Neocleous, Shi-hong Jiang</i>	87

5 Depth of Field Control in Incoherent Hybrid Imaging Systems

	<i>Sherif Sherif, Thomas Cathey</i>	111
5.1	Introduction	111
5.2	Hybrid Imaging Systems	111
	5.2.1 Digital Post-Processing	112
	5.2.2 New Metric for Defocused Image Blurring	112
5.3	Extended Depth of Field	113
	5.3.1 Design of a Rectangular EDF Phase Plate	114
	5.3.2 Performance of a Logarithmic Phase Plate	119
	5.3.3 Performance Comparison of Different EDF Phase Plates	125
5.4	Reduced Depth of Field	128
	5.4.1 Design of a Rectangular RDF Phase Plate	130
	5.4.2 Performance of a Rectangular RDF Phase Grating	132
5.5	CCD Effect on Depth of Field Control	136
	5.5.1 Charge-Coupled Device-Limited PSF	136
	5.5.2 CCD Effect on Depth of Field Extension	136
	5.5.3 CCD Effect on Depth of Field Reduction	138
5.6	Conclusions	140
	References	141

6 Wavefront Coding Fluorescence Microscopy Using High Aperture Lenses

	<i>Matthew R. Arnison, Carol J. Cogswell, Colin J. R. Sheppard, Peter Török</i>	143
6.1	Extended Depth of Field Microscopy	143
	6.1.1 Methods for Extending the Depth of Field	144
6.2	High Aperture Fluorescence Microscopy Imaging	146
	6.2.1 Experimental Method	147
	6.2.2 PSF and OTF Results	149
	6.2.3 Biological Imaging Results	151
6.3	Wavefront Coding Theory	152
	6.3.1 Derivation of the Cubic Phase Function	153
	6.3.2 Paraxial Model	153
	6.3.3 High Aperture PSF Model	154
	6.3.4 High Aperture OTF Model	156
	6.3.5 Defocused OTF and PSF	157
	6.3.6 Simulation Results	158
	6.3.7 Discussion	162
6.4	Conclusion	164
	References	164

Part II. Nonlinear Techniques in Optical Imaging

7 Nonlinear Optical Microscopy

<i>François Lagugné Labarthe, Yuen Ron Shen</i>	169
7.1 Introduction	169
7.2 Second Harmonic Nonlinear Microscopy	170
7.2.1 Basic Principle of SHG	170
7.2.2 Coherence Effects in SH Microscopy	174
7.2.3 Scanning Near-Field Nonlinear Second Harmonic Generation	175
7.3 Sum Frequency Generation Microscopy	177
7.3.1 Basic Principle of Sum Frequency Generation	177
7.3.2 Far-Field SFG Microscopy	178
7.3.3 Near-Field SFG Imaging	179
7.4 Third Harmonic Generation Microscopy	180
7.5 Coherent Anti-Stokes Raman Scattering Microscopy	182
7.6 Multiphoton Excited Fluorescence Microscopy	184
7.6.1 Two-Photon Excited Fluorescence (TPEF) Microscopy	185
7.6.2 TPEF Far-Field Microscopy Using Multipoint Excitation	188
7.6.3 4-Pi Confocal TPEF Microscopy	189
7.6.4 Simultaneous SHG/TPEF Microscopy	190
7.6.5 Three-Photon-Excited Fluorescence Microscopy	191
7.6.6 Stimulated-Emission-Depletion (STED) Fluorescence Microscopy	192
7.7 Conclusion	193
References	193

8 Parametric Nonlinear Optical Techniques in Microscopy

<i>M. Müller, G.J. Brakenhoff</i>	197
8.1 Introduction	197
8.2 Nonlinear Optics – Parametric Processes	198
8.2.1 Introduction	198
8.2.2 Optical Sectioning Capability	200
8.2.3 Second Harmonic Generation (SHG)	200
8.2.4 Third Harmonic Generation (THG)	201
8.2.5 Coherent Anti-Stokes Raman Scattering (CARS)	202
8.3 Third Harmonic Generation (THG) Microscopy	204
8.3.1 General Characteristics	204
8.3.2 Selected Applications	205
8.3.3 Summary	209
8.4 Coherent Anti-Stokes Raman Scattering (CARS) Microscopy	209
8.4.1 General Characteristics	209
8.4.2 Multiplex CARS	210
8.4.3 Summary	214

8.5 Conclusion	214
References	216

9 Second- Versus Third-Harmonic Generation Microscopy in Biological Tissues

<i>Chi-Kuang Sun</i>	219
9.1 Introduction	219
9.2 SHG Microscopy	220
9.3 Bio-Photonic Crystal Effect in Biological SHG Microscopy	221
9.4 THG Microscopy	228
9.5 Conclusion	230
References	231

Part III. Miscellaneous Methods in Optical Imaging

10 Adaptive Optics

<i>Chris Dainty</i>	235
10.1 Introduction	235
10.2 Historical Background	236
10.3 Strehl Ratio and Wavefront Variance	239
10.4 Wavefront Sensing	240
10.5 Deformable Mirrors and Other Corrective Devices	243
10.6 The Control System	245
10.7 Low Cost AO Systems	248
10.8 Current Research Issues in Astronomical Adaptive Optics	250
10.9 Adaptive Optics and the Eye	252
References	254

11 Low-Coherence Interference Microscopy

<i>C.J.R. Sheppard and M. Roy</i>	257
11.1 Introduction	257
11.2 Geometry of the Interference Microscope	259
11.3 Principle of Low-Coherence Interferometry	261
11.4 Analysis of White-Light Interference Fringes	263
11.4.1 Digital Filtering Algorithms	264
11.4.2 Phase Shift Algorithms	265
11.5 Spatial Coherence Effects	266
11.6 Experimental Setup	267
11.6.1 The Illumination System	267
11.6.2 The Interferometer	267
11.7 Experimental Results	269
11.8 Discussion and Conclusion	271
References	272

12 Surface Plasmon and Surface Wave Microscopy

<i>M.G. Somekh</i>	275
12.1 Introduction	275
12.2 Overview of SP and Surface Wave Properties	276
12.3 Surface Plasmon Microscopy – Kretschmann Prism Based Methods	282
12.4 Objective Lens Based Surface Plasmon Microscopy: Amplitude Only Techniques	285
12.5 Objective Lens Based SP Microscopy: Techniques Involving the Phase of the Transmission/Reflection Coefficient	287
12.5.1 Objective Lens Interferometric Techniques	287
12.5.2 Fluorescence Methods and Defocus	294
12.5.3 Discussion	301
12.6 SP Microscopy in Aqueous Media	302
12.7 Discussion and Conclusions	304
References	306

13 Optical Coherence Tomography

<i>Stephen A. Boppart</i>	309
13.1 Introduction	309
13.2 Principles of Operation	310
13.3 Technological Developments	314
13.3.1 Optical Sources for High-Resolution Imaging	314
13.3.2 Spectroscopic OCT	315
13.3.3 Real-Time OCT Imaging	316
13.3.4 Optical Coherence Microscopy	319
13.3.5 Beam Delivery Systems	320
13.4 Applications	322
13.4.1 Developmental Biology	322
13.4.2 Cellular Imaging	325
13.4.3 Medical and Surgical Microscopy – Identifying Tumors and Tumor Margins	327
13.4.4 Image-Guided Surgery	329
13.4.5 Materials Investigations	331
13.5 Conclusions	332
References	333

14 Near-Field Optical Microscopy and Application to Nanophotonics

<i>Motoichi Ohtsu</i>	339
14.1 Introduction	339
14.2 Nano-Scale Fabrication	340
14.2.1 Depositing Zinc and Aluminum	340
14.2.2 Depositing Zinc Oxide	345
14.3 Nanophotonic Devices and Integration	346

14.3.1 Switching by Nonlinear Absorption in a Single Quantum Dot . . .	347
14.3.2 Switching by Optical Near-Field Interaction Between Quantum Dots	348
14.4 Optical Storage and Readout by Optical Near-Field	351
14.5 Conclusion	354
References	355
15 Optical Trapping of Small Particles	
<i>Alexander Rohrbach, Jan Huisken, Ernst H.K. Stelzer</i>	357
15.1 Introduction	357
15.2 Optical Levitation	358
15.2.1 Momentum Transfer	358
15.2.2 Experimental Setup	360
15.2.3 Applications	361
15.3 Optical Trapping	362
15.3.1 Principles	362
15.3.2 Optical Tweezers	364
15.3.3 Photonic Force Microscopy	366
15.3.4 Atom Traps	370
15.4 Theory	370
15.4.1 Arbitrary Focused Fields	370
15.4.2 Scattering by Focused Fields	372
15.4.3 Position Detection	373
15.4.4 Trapping Forces	375
15.4.5 Thermal Noise and Trap Calibration	377
15.5 Experimental Setup	380
15.5.1 Mechanics and Optics	380
15.5.2 Traps and Probes	381
15.5.3 Electronics	382
15.6 Applications of Photonic Force Microscopy	382
15.6.1 3D Thermal Noise Imaging	382
15.6.2 Micro-mechanical Properties of Single Molecules	384
15.7 Future Aims in Photonic Force Microscopy	385
References	386
Index	389
